Book Descriptions:

We have made it easy for you to find a PDF Ebooks without any digging. And by having access to our ebooks online or by storing it on your computer, you have convenient answers with brother select-o-matic sewing machine manual . To get started finding brother select-o-matic sewing machine manual , you are right to find our website which has a comprehensive collection of manuals listed. Our library is the biggest of these that have literally hundreds of thousands of different products represented.

Book Descriptions:

brother select-o-matic sewing machine manual

If you miss my ramblings, please come join me on instagram. I'm so much better about sticking photos up there! Every time I use it I fall more in love with it. It is smooth, consistent and reliable — every damn time. It doesn't throw fits. And it makes the most charming and satisfying purr when its running. Seriously, it's my sewing nirvana. I also get a fair number of emails about this gem of a machine, so I think it's time for a little update. The machine is sort of a puzzle box, so let's start with a diagram It should screw right off. How about that! Now you can clean the cams and make everything spiffy and new. Good news here, folks. This machine was based on the patents for a Singer 15 so it's super easy to find reproduction parts. Happy little list with links below I prefer reproductions and avoid adapters for "snap on" feet. The snapons aren't a perfect fit IMO. It's bright and it won't burn the hell out of your hand! Love this one If yours is SIDE LOADING like mine, I've tested this part and it works Some Selectomatics were FRONT loading, meaning the slide plates opens to the FRONT. If yours is FRONT loading unlike mine! this might work, but I can't personally vouch for it Here you go, Margaret! Readers are kind enough to send me photos of their machines. Thank you for sending your photos and letting me share them! I'd love to share more of these beauties! I would like to return the 12 doll dress if I can and order 2 more in a size 1314 inch doll. Do need to go back to etsy to do that. And your clothes are sooo well made! I am pretty sure my machine is like yours. I cannot seem to find the needles for it. They load from side to side. Any ideas Thanks much. If you have a way to appraise this machine I would like more info on that too. Sincerely, Sue When you put the needle in, put the flat side to the right. If you have any photos of your machine I would love to see them. Happy sewing!<http://chromoink.com/updates/candy-alise-65-user-manual.xml>

- **brother select-o-matic sewing machine manual, brother select-o-matic sewing machine manual pdf, brother select-o-matic sewing machine manual download, brother select-o-matic sewing machine manual free, brother select-o-matic sewing machine manual online.**

I think it may have to do with the needle position knob assembly on your Brother Stitchomatic. I am hoping to know what exactly is behind the "window" there. Can please help me I very much appreciate your time! Mike I just took a video, but the little indicator in the window changes as you turn the position knob assembly. It feels like it's on a spring. I'm trying to fix it up a little and slowly figuring how it works. Thank goodness I found your site because it seems to be really difficult to find much info about this one. Anyhow on mine, it looks like the light switch knob either eroded away or broke off at some point so I'm trying to figure out what I can do to fix or replace it. I'm wondering whether you can tell me whether the original switch is a lever that you lift up or down, a dial that turns, or a "push button" type I love to know that my ramblings are helpful. Mine is a little corroded, so I wouldn't be surprised if that was an issue. I will send along two photos — one so you can see the switch and the other so you can see how it was wired. Let me know if I can help any more! I haven't seen one in pink before — I bet it's gorgeous! It turns out I have almost exactly the same model. Mine also has a "Good Housekeeping" tag, but otherwise looks identical to yours My machine actually belonged to my great grandmother, then my mom, now it's mine. It's been someone's primary sewing machine pretty much all this time and is decently well maintained. I recently moved to Maine and this machine was one of two that I hand carried to the new house. It was also the first to get set up, haha. I absolutely love mine, I hope you enjoy yours! I am trying to fix a Brother 100 Selectomatic for a lady. I have the owner's manual and shared it in an earlier blogpost. If you find a

service manual, please let me know. Good luck I am trying to fix the tension assembly on my machine. Do you have any photos of yours taken apart.<http://ezokniga.com/uploads/candy-aquamatic-3-service-manual.xml>

Looking at a photo has not been useful as it does not show the spring or plastic disc placement. Any information would be helpful. Would love to get my machine up and running. I have the Atlas version of this machine and have the original manual and pattern selector dial, as well as the pdf version of both Atlas Select o Matic and Brother Select o Matic manuals. Would be happy to share these with anyone who needs it. The manual is linked on the original post about this machine this post is just an update. I added a photo of the tension assembly see update in the post above, but I don't have one of it taken apart. Thanks! It sews well but my material does not feed, i have to pull it thru. Is there something I need to adjust I have the 2JC 8867. It has a Wizard label on it. It's very clean and runs very well. I have a manual I printed from somewhere online, but I was so glad to read your articles about these machines. I would love to send you pictures of mine. Come and join me on my sewing misadventures. My dad bought it for her in 1946, I believe. I need a manual for it and would like to purchase the zigzag discs or cogs that go with it. Mothers original discs burned in a fire they had in 1980. Any suggestions Advertisement Add your voice. Click below to answer. ThriftyFun is powered by your wisdom. The other sites I tried didnt go as far back as 1946. Reply Was this helpful. Once you have the model number, you may have to go to several sites before actually finding a suitable manual. Advertisement Most of the manuals even PDF downloads will cost 10.00 or more so be sure you have found the right model. There are usually photos of the machine so be sure to compare those with your machine. Finding the discs cogs may take a lot of searching over a period of time. If not, brother.com If you cannot get information from the site, give them a call. Reply Was this helpful. Yes Advertisement Add your voice. Click below to answer. Answer Advertisement In This Page Brother Sewing Machine Manuals. Finding Replacement Parts for Janome Sewing Machine. Replacing a Sewing Machine Fuse. Replacement Parts for a Precision Sewing Machine. OR scan my code! I have been looking for someplace to share it so if anyone is looking for it they could get it. If you forward it to me I can distribute it for you if you'd like. Let me know. My mother's manual is in Japanese it's called an "Automatic Zigzag" ZJ2B431 but looks just like the teal Selectomatic. I am stumbling through the manual AND learning to sew, so, English instructions would be VERY much appreciated. Thank you! If you still have the PDF I would be grateful for a copy. Seems like an incredible machine! If the Pdf manual is still available, I would greatly appreciate one. I got a beautiful one as an heirloom and am trying to get it going. It's in great shape, just needs some technical input. Thank you! Stephanie Thanks for your generosity. If I can be of any assistance please let me know. You have an open invitation to dinner in Greece, if you ever visit the country. By the way this is where I live. Kimon Alexander I just found a "Selectomatic" in my local thrift store lucky me! and was thrilled to discover its in working condition. The bobbin tension is a little too tight though and I don't have the foggiest idea how to fix it. Dad bought in Japan. Would love to have the manual. Welll written! Please help! Thank you. Notify me of new posts via email. My Sewing Machines Follow Stitch Nerd If you have a sewing machine manual that you would like to share with other Stitch Nerd readers, I will happily distribute it for you offline, for free. Also, I do not know how much your sewing machine is worth. All I can advise is that if you are looking to sell, list it for the minimum amount you are willing to accept. If you leave a comment or question, you may receive a delayed response as I am currently extremely busy with other projects.

Thank you for understanding. Put it in a Ham Holder. Available at Stitch Nerd Custom Shop This slideshow requires JavaScript. Keep up with me. Because of this, I often find myself first asking my husband because sometimes he knows and then often turning to the universe aka "Google search" for answers. Sometimes, my husband and I will waste hours randomly searching together and learning about new things. And he weighs a whoppin' 37 lbs! The owner's name was listed at the

top, and I was aware that she had died right around the time I bought the machine. So a search for an obituary online produced one that seemed to line up with name, location, and date of death. I believe Gandalf the Green was previously owned by Linda Kay Plant Garrett of Abilene, TX. Thank you, Linda, for taking good care of your machine! But in my message board searching, I got the impression that the sewing machines made under the label "Wizard" were sold to Brother, a company that still makes sewing machines today. Too bad Brother doesn't provide good online records about their vintage machines like Singer and some other brands do! On the site, I still had to convince a search to give me the actual results I wanted for anything Wizard brand. I finally achieved my goal of a being able to buy a manual with this pdf download for a Wizard 3KC 8841, which seemed to be nearly the same as my 8842 model the "zigzag width knob" is slightly different because it's probably for the model just before mine. Even the repair guy was unfamiliar with the unusual feature for turning the stitch dial, and after a little convincing, decided he would keep the manual with the machine just in case. So I just started looking at photos of any plates that websites bothered to post. I was able to select about 3 by sight from the collage of photos that looked similar to the one on my machine. Then I discovered that selecting a photo for enlarging also gave me a unique file name. The picture labeled "B4139.

jpg" appeared to be the best match. Out of curiosity, I did a search to find out what the various models looked like. It sold 10 days later. The B4139 or NZ3LG plate fits the Wizard 3KC 8842. Knob B aka "The SwitchOver Knob" is what the Brother manual calls the zigzag width knob that you have to hold in neutral to turn the stitch selector. According to page 15 of the Brother manual It also allows you to set you machine for semiautomatic operation.It turns AND pulls out! Sewing machines need not be outofdate, but can be as modern, as efficient and welldesigned as the cars we drive and the homes we live in. It will often seem to do your thinking for you. Even the beginner enjoys the AUTOMATIC ZIGZAG sewing, and even the expert is amazed at its ease." And all without a computer brain.And if you have the Wizard 3KC 8842 model and are searching for a manual of your own, I would recommend the manual for the Brother 210 over the Wizard 8841, although both manuals are helpful. He said the previous owner married a WWII vet after the war, and he's pretty sure the machine was purchased in Japan and shipped over to the states shortly after.I was sort of collecting hand me down sewing machines in Vermont but had to purge two of them in 2012. That was after I bought Max so I don't feel so bad. But cool stuff. I'm always looking at craigslist juuuust in case. Love going down those rabbit holes, but they can be so fulfilling! This is such a great tale of how the internet can really be a boon for a persistent sewist. Glad to hear that Gandalf's tricks have been revealed! LOL, before the internet, I used to read encyclopedias Jimminy Cricket taught me how to spell that word and to this day I hear him singing it in my head, but I digress. I would go to look up something and see an interesting word.Husband used to read encyclopedias too, I ask him off the wall questions all the time.

One time he got annoyed and wanted to know why I even thought that he might know that particular thing, I just shrugged and said that I didn't know what he knew until I asked. Such a pretty sewing machine. I am resisting, can you imagine the freight charges I was really lucky my teal version the color I probably would have picked from all the options was within driving distance for pick up! By the way, I also end up on web search trails, too, particularly regarding film trivia on IMDB and wikipedia.The older they are, the more metal parts they have. Industrial machines are still metal, but domestics have become more and more plastic to meet the demand for women who want something lightweight and often pack up their machines to keep in the back of a closet until they decide to pull them out for a project. And there is actually a vintage domestic at the Dallas Opera shop that has been converted to run on an industrial meaning "more powerful" motor. Now, I'm more worried about breaking my new Baby Lock than the Wizard. Last August we were flooded out of our home and lost the sewing machine we had we're in the SCA and make all our own garb. We have a nonfunctioning 3KC 8844 in the garage that she's had since before we got married. I've never

seen a Wizard before, but I do know one thing, old is usually better than new any day, because things were made to last. Now my quest is to get this thing running before she gets back. I've really enjoyed reading your post. Wish me luck. I can fix the stand, but I'll have to take it to a shop down town for the rest. I'd post a picture if I could but it's a sort of turquoise and cream color. I'm sort of a vintage Brother sewing machine geek, I have 11 of them. Wizard machines are just one of many brands that were built by Brother. In the '50s and '60s they were the best Japanese sewing machines you could buy.

Metallic blue, baby blue and white, light minty blue, turquoise and white, tan and cocoa, white and red, and my favorite metallic pink and cream. I love, love that dark green one you showed, I don't think they sold that color in the US. I still want a light pink one and a bright pink one. Atlas machines were also built by Brother and they were pink. I am very obsessed with learning as much about it as I can The Brother 110, 190, 210, 270, 280 and 281 that I have, and probably many more models, are all very much alike in mechanics. The major differences are how they're dressed colors and whether the bobbin winder is in front or on the top, or whether they will take cams or not. I have to admit I am pretty sold on my Bernina 710 with a "brain" for lots of things, but I do love playing with my vintage Singer Rocketeer. Who wouldn't love a machine named "Rocketeer" or "Wizard". Soooo much more fun than "710", right Keep asking the universe for information, AND sharing! They are cool looking machines. Apparently, you can't beat a machine with a cam system. I've had it for about 30 years it's the same as Ryan's. I lovingly passed it on to my daughter, and purchased a Singer Slant o Matic Rocketeer on EBAY. Right after doing that, my daughter returned my machine, saying she's just not a seamstress surprise not. I also have a carnation pink Barbie I think machine that I inherited from my grandmother, and an old green ELNA minus cord and knee bar from my husband's mother. I shop vintage machines on EBAY and just drool over cabinets and promotional products. Anyway, I wanted to say "thanks". I will now be able to use my Brother to the fullest, and I'm looking forward to it. It really is like a Cadillac machine Happy sewing! Ding! The first picture I clicked took me here. Now I know where to find a manual and some parts for this lovely machine. That way I will have some idea what I have to look for.

I will bring this machine to a local repair store first thing in the morning tomorrow to see if they can help me or not. Thanks again for all the information you put together in above. Cheers to your serendipity!! The local repair shop had the exact cord in stock so they are putting it on to my machine now. I will get the machine back this weekend. When we hook it on to the outlet using that black code we found no issue on the machine. It just needs some touch up, clean up and some maintenance. I would love to share pictures with you when it's all cleaned up! So glad it seems to be in working order! Where can I get a manual for it and more info about this one. Thanks Paula in KY Is there another identification number elsewhere on your machine. Model numbers are usually a little shorter. It's possible the model label was a sticker that's been removed sometime over the years. For a manual try Linda Wilkens at Relics. Look for Wizard, and look at the Brother manuals too because every Brother badged machine usually has a Brother branded twin. Cari I saw sparks and smoke coming out from the motor. I have to take it back to the shop. I am guessing that the motor has to be replaced. It's a good looking machine so I do not want to give up. Sad but that's What's happening right now. I have the exact same machine as you in its original case. I inherited it from my mom in 1993 but haven't been able to thread the bobbin. That problem will be solved shortly, thanks to you. Your links and advice made me feel that dragging this thing around for 20 years was actually worth it. Mine is in perfect condition but sadly lacks the manual and you're right most of the buttons and knobs have been an unsolvable mystery without the manual. Thanks again!! Same machine to the tee!! Cabinet and all. It runs just needs a bobbin. Any idea what these machines are worth.

I know you said it might have been shipped from Japan but can't find really any information on it

since the cabinet is brother as well. The vintage machines that sell for top dollar that I know of are all Singers one of them happens to be the 221 model I inherited , and it is only because the demand is really high since lots of people still use them. I don't know what kind of records Brother still has on it's vintage machines, but Singer has amazing information on theirs maybe part of the reason old Singers are still in demand. I have a problem with the belt, it's not right enough turn the wheel. Any ideas on how to tighten it up. I see a screw that looks like I could loosen it and pull the motor and pulley down a bit, but I can't get the screw loose. Personally, I would have it looked at by a repair shop and have a general tuneup if it hasn't been used in a while. The screw may need a little grease to loosen and a repair shop would have the tool to help with something like that. Even my repair guys had never seen a Wizard and had never seen a machine that has such an unusual way to change the stitch selection dial. I am normally a do it yourselfer, and I'm going to oil it up really good before I use it. I got the screw loose with the help of my awesome hubby, but the belt is too old an stretched to turn anything. Anyone know how I could go about ordering a new belt that would fit it When Western Auto went out of business it seems the sewing machines they made were acquired by the Brother company, as I wrote about above. Brother still exists as a company and sells many things like office equipment besides sewing machines. I don't think it was so much of a "rebadging" as it was a buyout and renaming. Beige is rather boring considering how many other colors machines were being sold in back then. Western Auto contracted with several manufacturers to put the Wizard name on the merchandise they sold, they did not make their own products.

They got their sewing machines from Brother. Back in the '50s, '60s and '70s this was a very common practice for Dept. Two other brands by Brother sold in Australia were Empisal and St. James. Possibly more, these are just the three brands I'm sure of. One of the sure fire ways to tell is the big round reverse button inside the stitch length knob. No other manufacturer made it quite like that. For all I know there could well be an old warehouse somewhere in Japan full of Brothers old records that have just never been accessed. Or they could have been destroyed over the years as the company grew. Or lost in a fire. Nobody knows. There just are no available records for any older Japanese sewing machines. There are no older Necchi records because of a factory fire. Even some of Singers old records are gone. Yes, I agree that the Brother website doesn't keep track of older stuff, just the absolute most current things. They used to have tons of the old manuals on the site but took them down a few years ago. There is still a master directory list of old manuals from Brother floating around but I can't get into it any more. Calling them with questions about their vintage machines is no better, no one who works there now knows anything. And then I found this blog, very helpful. Another helpful thing was discovering a little paper in the back of my machine manual called the "Interchangeable Parts Catalogue" for Brother Models 110, 190, 210, 230, 270, 280, 290, 370, 380, 390. Many other parts are interchangeable, but not all. Thanks for an endearing and witty blog entry. I found you having purchased a Brother 210, nearly identical to Ryan's pictured above. Your Wizard strikes me as the purer version of MidCentury geewhizness, its teal body evocative of casseroles, the unlimited potential of suburbia, and an optimism that is sadly outofashion. Who knew that Gandalf had a Brother Well, I didn't.

I have an Atlas and a Selectomatic whose frothy parts bins were apparently a mere saunter for Wizard engineers. I also have a Streamliner and a later Atlas in straightstitch versions that must be close relatives of our siblings. I appreciate your blog telling how to change the stitch pattern selector. I was able to test out some stitches; however, my straight stitch is not exactly perfectly straight. I pushed the Button B in after turning the stitch width as close to 0 as possible. Is there a specific stitch to choose on the stitch pattern selector that yields a straighter straight stitch. I don't have the manual yet, and have figured out the rest except that one point. I find that a lot of modern cheapy machines have the worst straight stitches, especially when set to a long "basting" length. I would take off the top cover plate, but I can't figure out how to get it off with the big shiny button on the top right in the way. Normally I get the dust out and check out the cams when I take off that top

cover plate. It's a mysterious machine! I have been shuffling aimlessly on the internet trying to find info about Mom's Brother. After pouring over hundreds of pictures on the internet of vintage seafoam green Brother sewing machines I had come up with nothing at all that closely resembled my machine, then I saw your wizard and nearly squealed out loud with excitement. After reading your whole story the pieces are finally coming together and I am so grateful to know more about this fantastic machine's history especially about the B knob to switch stitch width I, too, thought the machine was broken. I've found a few numbers but none seem to match any model numbers I've seen eg 210. I am really looking forward to searching some of the manuals you discuss.

I won't say that I lost the manual and original tin box of accessories which Mom gave me with her lovely sewing machine a college graduation present from her mother when she was at Berkeley, because I know I put it in one of those "safe places" that I'm always losing track of. Meanwhile, until I find it, maybe one of your manuals will give me some direction. Mom said she was able to wind a second bobbin while sewing with the machine. Do you know how to do that I simply can't thank you enough!!! Most machines have it somewhere around the main column but it can be on the back, front, or other side depending on the machine design. Sometimes it's on an attached plate, but my Wizard has it etched into the metal. There are numbers elsewhere on my machine labeling some of the parts but those are usually hidden under or inside, so not as obvious and there is a plate with a model number for the motor as well it is actually on the motor housing. Thread the spool up through the tension disk to the right of the thread spool and up to the bobbin push the winder toward the belt so it will wind. Once you have started winding the bobbin, you can thread your machine with a second spool on top and thread everything as normal for sewing. Your bobbin will wind as you stitch, because as the belt moves around the hand wheel, the bobbin turns with it and it will automatically pop back out when it is full. Hope this makes sense. Happy sewing! Your blog has been very informative. Surprisingly, it is in a full cabinet and instead of a long foot pedal, the pedal is mounted in the cabinet with what looks like a knee switch. Was curious if anyone else has seen that. Thanks again for the info. It sounds like your cabinet just allowed for the foot pedal to be mounted at knee level. You can probably put the pedal on the floor if you prefer foot operation. Instead of starting to sew, she just kept lifting the presser foot, hehe. Pristine condition.

One little problem I can't get the smaller chromed disc on the hand wheel to disengage. When I turn it, the entire shaft and needle move with it; there is no resistance with which to disengage. Any suggestions on what to do. Thanks so much! It might be really tight if someone overtightened it previously. I hate to sound so ignorant, but this doesn't work for this particular machine. When I hold the handwheel, the small chrome wheel just turns freely in my hand all the while, the needle moving also. I have used your advice on other machines, with success, but with this one it won't accomplish the goal. I also find that I am unable to remove the chrome inner wheel after removing the screw. Does the handwheel stay locked on until the chrome wheel is disengaged. Love your Cambie dress. If yours is spinning in a complete circle it sounds like something isn't connected. I would call a machine repair place and see if they can help you over the phone because they would know more than I do about how to fix it if it's truly broken. I'm not sure what to tell you without sitting in front of your machine myself. I am having trouble with mine handed down to me from an exmother-in-law about 40 years ago. I decided to replace it with a new, inexpensive one what a joke and after an attempt to use the new one, decided I would do some research about my Wizard to see if I could find someone that worked on them. Taking it to a shop next week for some long overdue TLC. It seems that yours and mine might share some of the same features. I am curious about the knob on the top of the machine on mine I cannot figure out how to move it or what it does. Can you give me a clue. Thanks! The Brother 210 manual labels it as "Knob D" and explains it as "Knob D The Index Knob This knob will tell you at which point in the pattern the machine is stitching. It also makes it possible for you to start your pattern at any point desired, simply setting Knob D accordingly.

If you wish to start your pattern at the beginning. Knob D is set at zero. To set Knob D, first press Knob B inward as far as it will go. Then turn Knob D to the right until you have set it at the point desired. Now pull out Knob B and your machine is ready to begin sewing." For straight sewing, Knob D will just stay on "zero". I have a cousin of his living here. It is a Coronado Selectomatic. A photo is on my blog. Thought you might like to know that Brother actually manufactured your sewing machine and put the Wizard label on it for Western Auto. For example, you will find many older Brother sewing machines with the Kenmore label as well. Too bad Brother doesn't have a searchable database like Singer does for their old machines. I'm just learning how to sew and it did not come with a manual. Any information that you could give me would be really appreciated!! Thank you. Even if you can't find an exact model number match, you might be able to find a manual for a machine that has similar features and dials. Good luck and happy sewing! Seeing as Brother, Wizard and Atlas all kinda go hand in hand. Here is a place for parts. LOVE your post and machine. I got home with her last night, and needed to find a space for her today and took the opportunity to straighten up my sewing areas so she can have a proper welcome. I was not sure of the model and the cabinet, machine and the hang me down sewing goodies in the cabinet as all still in the SUV. She is a special machine to me; she belonged to a dear friend's mother Mitsuko, who passed over ten years ago. Since then the machine has been living in her son in his basement. He is tired of it taking up space and was going to throw the beauty away. After talking to his sister, my friend asked me if I would like the machine. As she told me about how her Mom was so excited to get this machine with its lacquer large cabinet, I started to get hopeful that it might be a zigzag.
