Its flexible miter angles and compound cutting capability provide versatility on the job. An ideal tool for trim carpenters, framers, and woodworkers who demand precision and reliability, the C10FCE2 is the lightest and most portable compound miter saw in its class. Since its inception, Hitachi has pioneered innovative technologies that have improved the quality of craftsmanship worldwide. Hitachi is a leader in power tool research and development and has achieved many firsts in the power tool industry. Today, Hitachi continues the tradition of innovation and engineering with new features in addition to classic quality. Since its inception, Hitachi has pioneered innovative technologies that have improved the quality of craftsmanship worldwide. Today, Hitachi continues the tradition of innovation and engineering with new features in addition to classic quality. The 15amp motor generates a no-load speed of up to 5,000RPM for making crosscuts and miters with ease, even on the toughest cutting jobs. <http://fnathservices.com/upload/fluke-9171-metrology-well-manual.xml>

For ease of use, a comfortable horizontal handle with a vibration-reducing elastomer grip keeps you in control at all times, a large table provides a stable guide and sturdy support and a built-in clamping system holds your workpiece in place. The thumb-actuated positive miter stops allow for simple miter adjustments between 0 and 52 degrees left and right. This design allows you to easily change the angle of the cutting blade for creating miters in crown molding and other trim pieces. The bevel has a range of 45 degrees to the left to provide gorgeous bevels on the first try. A dust collector minimizes the accumulation of dust and particles and the easily accessible carbon brushes will help your saw perform for the long term. This tool provides smooth, accurate miters and crosscuts with wood, plywood, decorative panels, soft fiberboard, hard board, and aluminum sashes. Weighing just 26.3 pounds, the C10FCE2 is the lightest 10-inch compound miter saw in its class. This tool is compatible with the UU610 miter saw stand sold separately and includes a 10-inch 24-tooth TCT saw blade, pivoting flip fence, vice assembly, dust bag, 10mm box wrench and a material support extension. The Hitachi C10FCE2 15Amp 10Inch Compound Miter Saw comes with a 5-year warranty. Hitachi Power Tools Hitachi Koki USA, Ltd. provides professional-grade power tools and pioneered innovative technologies that have improved the quality of craftsmanship worldwide. To

calculate the overall star rating and percentage breakdown by star, we don't use a simple average. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzes reviews to verify trustworthiness. Please try again later. Joe Rawe 5.0 out of 5 stars This saw changed that completely; it is spectacular, seriously. The 5 year warranty is great to have, it cut square immediately out of the box and has plenty of power.<http://www.techbis.pl/files/fluke-92b-manual.xml>

The blade it comes with isnt too bad either, though I still put a Freud combination blade on it just to be safe. One thing I noticed is that there isnt any wobble when its straight up; if you push against the handle a bit the only thing that flexes is the handle not anything else so it can only cut square versus cheaper models often have some movement and require much more care and arent always accurate. Seriously, I cannot recommend this saw enough even for professionals like myself. Hitachi has a new fan and I can promise I will be buying more very soon! I was very happy to receive this saw. Unlike others, it was well packed and arrived without damage. However, the instructions are terrible. Why cant these people spend as much time correctly translating the English part as they do the French and Spanish. The real trouble started when I took inventory. I thought I was missing the 10mm Box wrench, but during fiddling with attempting to assemble all the accessories to the saw I discovered the wrench mounted on top of the frame between the motor and the blade. A few notes to all 1 The Holder B mounts to the rear of the saw frame to keep it from tilting rearward. It is bent in such a way that it only contacts the workbench surface if mounted in one direction. 2 If the Vise Assembly is mounted on the right of the blade it may block the motor if it is not exactly positioned correctly, which seems like its useless there. 3 It was difficult to mount the Sub Fence and Plate A together so the plate either locks the sub fence in place, prevent wear at the bolt between the two fences, or what ever its supposed to do. After mounting and bolting it down to a work table I finally finally got to cut some wood, which it does exceptionally well. The blade and motor are vibrationless and it easily and accurately cut the scrap wood framing I was using. I have a few 80 tooth 10 in. I may even buy a nonferrous metal blade for extruded aluminum framing I need to occasionally cut.

Out of the box, the Hitachi felt 10x better. I gave up the sliding function to hopefully get a better built saw, and I was not disappointed. The motor spins the blade effortlessly and gets it up to max RPM very quickly. Its also half as loud as the cheaper junk. The noise it produces is still loud, but its not nearly as obnoxious as what came out of the other one. All other functions are solid and accurate. The weight is also a huge plus. This saw is so much easier to carry around. I have one complaint. But they werent 100% true. The blade was perpendicular to the base, but not to the fence. After fiddling with the fence, I found NO WAY of making both sides of the fence perfect. You could get one side or the other perfect 90 degrees to the blade, but I couldnt make the fence faces on the same plane after that. Kind of annoying, but at this price point, I wasnt upset at all. I just took out my dremel with a carbide bit and made the fence mounting slots a tad longer on one of the sides. I kept testing until I was able to get them dead on plane, and both dead 90 degrees with the blade. Now its PERFECT! Looking forward to building some good stuff with this guy! There were a couple of minor problems getting it set up for its first use, though. The instructions are poorly written, my saw was missing the wrench supposed to be included to change the saw blade, and EVERYTHING was so freaking tightened down. I had to actually remove the plastic handle of the bevel adjustment lever and crank on it with a crescent wrench to get it to a vertical position. Im giving it five stars because once I got it sorted out for use, it works like a dream. Lightweight but robustly powered, it sliced through the moulding I was installing like the proverbial hot knife through butter after installing a nice hightooth Freud blade. Great tool once you get past the setup! Out of the box the blade was well aligned and square to the fence and table. I performed some cuts 90 and 45 miters.

Have not tried any bevel cuts yet. At 0 degree detente I had to dial in the pointer. Also it seems you will need to tighten the table handle to hold the blade firmly. Im not confident in just using the

detentes. A caution should you want to mount to a miter saw stand. I have a DeWalt stand and brackets. When mounting to the brackets i found that the mounting holes in the saw base were spaced differently. So brackets are not 90 degrees to the fence as the hole spacing is approx. I may try mounting the saw to a piece of plywood then to the brackets. It is very lightweight and easy to carry with one hand. At this price point I think it is a very good buy. I would not call it professional grade for heavy jobsite use. Detente on the trigger is just strong enough to be comfortable for long applications while providing control. As other said, dont expect much use from that tiny dust collection bag, and plan to connect it to a shopvac instead. Altogether a good tool that should last a while. Note that you will need to bolt this down The center of gravity is to the rear and the saw is a bit unstable otherwise. Lost a star for quality control issues Assembly instructions are awful, spending more time telling you not to cut your fingers off than it does telling you how to assemble the thing. The blade guard assemble is a bit wobbly and there are no means to adjust this. Sorry, we failed to record your vote. Please try again It has a great weight making it very easy to move around. The blade that it comes with is a good general purpose blade but I have ordered a finishing blade for the perfect cut. The saw was very accurate out of the box and was quite easy to put together. I can see the need for a 12 saw but for light work this is very good. Sorry, we failed to record your vote. Please try again Overall, I like Hitachi products. Great value and easy to use. If it seems right to you, dont hesitate to buy. Sorry, we failed to record your vote.

Please try again Chop saws have come a LONG ways since our parents days, theyre better built, with more features, and are cheaper. I nearly bought a 10 year old model off a friend for the same price, and his was not a compound mitre. Sorry, we failed to record your vote. Please try again Extremely happy with this purchase. It was worth every penny in my opinion, and it was the most affordable option at the time I purchased it so bonus. To date, it hasnt given us any trouble and weve been using it on wall construction, flooring, trim, etc. It cuts angles extremely well too. Pretty decent for a firsttime mitre saw purchase. Sorry, we failed to record your vote. Please try again Machine is performing just fine for my light duty carpentry. One issue, if you use the clamp on the right side of the platform the saw motor hits the support post and wont allow a complete cut. hmm. I had to improvise. Sorry, we failed to record your vote. Please try again Easy to operate and accurate cuts. Fast shipping as always. Sorry, we failed to record your vote. Please try again Acheter pour couper du plancher flottant. La lame nest pas la meilleure qualite comme cetait incluse avec la scie mais a fait une bonne job. Sorry, we failed to record your vote. Please try again All the specs are accurate. A great deal and a great tool. Sorry, we failed to record your vote. Please try again Light for carrying to the job, but well put together. This is a quality tool and I am very glad that I bought it. Terrific value as well. Sorry, we failed to record your vote. Please try again Am very happy with this purchase. I would order the same saw again. Sorry, we failed to record your vote. Please try again I would like it more if there would be bubble scale to adjust vertical angle of the show blade. It was bid difficult as company didnt provide an accurate and permanent marker. The user guide was bit confusing. Over all, does the job. Sorry, we failed to record your vote.

Please try again Sorry, we failed to record your vote. Please try again Ive been using it for a while and had zero problems with it. I cant find anything wrong. Since I have limited experience with other brands therefore declaring myself an amateur with saws, Ill rate it 4 out of 5. Sorry, we failed to record your vote. Please try again Page 1 of 1 Start over Page 1 of 1 In order to navigate out of this carousel please use your heading shortcut key to navigate to the next or previous heading.
