While it can print in two different colors and comes with a slideout quick reference card, one small drawback to any calculator with a printer is that you need to replace the paper and ink ribbons from time to time. When the ink shows signs of fading, purchase compatible spools of ink ribbon to replace them yourself. Step 1 Turn off the calculator, raise the tab at the rear of the printer cover, and then lift the cover off. Step 2 Pinch the ribbon lock switches towards each other in the direction of the arrows printed on the calculator, and then lift the ribbon spools off of their shafts. Step 3 Take the new ribbon spools and, holding them apart, guide the ribbon between the two spools around the four ribbon guide positions, and then put the spools on the shafts. Step 4 Rotate the spools until they click into place and release the ribbon lock switches. Rotate one of the spools to take up the slack, and then snap the cover back into place. Turn on the calculator and resume using it. He has written several articles for various websites and writes user guides and software manuals for several freelance clients. For the price of the MP11DX, you cant go too far wrong. The calculator is fast enough to keep up with me and the printout is clear and easy to read. Hopefully, a person buying a Canon desktop calculator will already know its basic operating procedures, because Canon instruction manuals are among the worst instruction manuals ever conceived. The instructions for the MP11DX are especially bad. The manual maintains its sustained awfulness as it goes from one cryptic calculation example to the next. It just doesnt get any worse than this. One of the main

attractions of the Canon MP11DX is its Calendar and Clock functions. Judging from the reviews, I am the only one who had a problem setting up the Calendar and Clock. Setting the Calendar and Clock functions was quite a challenge for me because my instruction manual provides somewhat confusing documentation of this subject. The manual's first step in this procedure pictures a key with icons of a calendar and a clock. After owning the calculator for over a year and a half, I finally held it under a lamp and looked straight down at the keyboard. Under ordinary circumstances the little black labels printed on the case at the top of the various keys would be hidden behind the keys. The specifications say that the battery is a CR2025, but the battery in my unit is a CR2032. When I received this new one, the printer switch worked intermittently but I didn't want to pay for, or go through the process of returning the calculator. Now the printer won't turn on and I'm beyond the return date. Shame on me. I should have returned it instead of gambling, or I shouldn't have bought it in the first place!

I have used this for financial reporting, calculations, and home projects. It never disappoints me in its performance. The display is clear and easy to read even on those late nights when you are bleary-eyed. I recently changed departments where I am employed. I ordered this same calculator I have previously used because it works for me. Please try again later. Please try again later. poidog 4.0 out of 5 stars The view is blocked by the lip of the display. The problem arises when entering a bunch of numbers, and you need to see the last entry. Then, you need to lean over the machine and peer into the paper well. Or, you can press the FEED button, but then you'll have a gap in your printout. Please try again later. Please try again later. Ol Man 4.0 out of 5 stars The paper holder is metal, that is good. The paper feeds easily. The characters print legibly on the paper from the 2-color ribbon. I have worn out several calculators in 45 years as a CPA; like the others, this one will last about 58 years. However, the price makes it very economical for the quality machine.
